

Veneer Composer

Spot heads, Hoses & Complete Systems *Eliminates "hot" and "cold" spots*

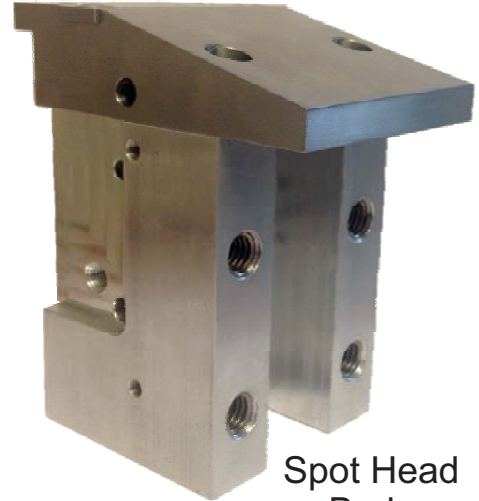

Removable Easy-Clean Nozzle Bar

Glue Module

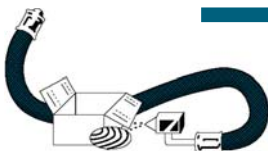

Heavy-Duty
Guide Plate

Spot Head
Body

- Temperatures throughout the APS system are tightly controlled within a few degrees
- The Easy-Clean nozzle bar and easy maintenance while the spot head is in place allows mills to reduce the number of spot heads by as much as 1/3 compared to standard OEM systems
- Consistently applies precise volume of adhesive at the correct temperature to ensure tightly bonded joints between random pieces of veneer.
- Precise adhesive volume and placement can prevent "bleed-through" on face sheets
- Includes a removable Easy-Clean nozzle bar and a removable glue module. Both the nozzle bar and the glue module can be replaced while the spot head *remains in-place*
- Any spot head or heated hose can be removed from service without affecting other parts of the system
- Please contact us for low-cost, factory-quality replacement hoses
